

Shade structures are less expensive than conventional roofing. They allow the air to flow creating a cool environment underneath the shade structure. With the right selection of fabric, harmful UV rays can be reduced creating a safe and pleasant playing environment for your children. Available in a large range of colours. *"Let us brighten up and protect your area".*

- IDEAL FOR USE IN PLAYGROUNDS AND RECREATIONAL AREAS
- ENGINEER DESIGNED
- CYCLONE RATED

Pyramid

Sails

Hip Roof Style

Octagonal

Hypar Sails

Suspended Membrane

Golf Cover

Bowling Green Cover

FABRIC

Standard fabrics include "Cooltone" and "Coolaroo" with UV ratings offering up to 98% UV blockout.

STITCHING

To avoid stitching thread breakdown from our harsh Australian outback sun we use a number 10 stitch thickness, double that offered by most of our competitors.

METAL WORK PROTECTION

All metal work is hot dipped galvanised after fabrication, ie, totally immersed for total rust protection. No other protection system offers a better prevention.

POWDERCOATING

Optional decorative powdercoat finishing is available on request. Prior to powdercoat application, the galvanised metalwork will have a light abrasive blast to remove gloss from the galvanising process to allow powdercoating to adhere.

ENGINEERING CERTIFICATION

Standard engineering is available on our standard free-standing designs. Should you require engineering specific to your site, an additional fee would apply to engineering costs.

INSTALLATION

It is the responsibility of the buyer to inform Parkequip Pty Ltd of any obstruction or pipe work, electricity, telecommunication lines etc below ground level.

FOUNDATIONS

The purchaser is responsible for any extra costs incurred due to rock excavation, unstable soils and or changes in ground levels. All concrete in foundations will be 20 mpa to Australian Standards.

WARRANTY

Our standard warranty prevails. Steel components will be guaranteed for ten years.

"Coolaroo" Commercial 95 Premium Knitted Shadecloth will not degrade, crack or show evidence of material breakdown resulting from ultra violet exposure for a period of 10 years from date of purchase.

All warranties do not include damage caused from mechanical friction, chemical erosion or stress resulting from structural tension.
